

Catapult Venture Managers Limited has led a £1.75m investment round into L3 Technology Limited.

The company is developing exciting new point of care equipment for the accurate measurement of blood cholesterol including full lipid analysis.

The technology enables immediate results for patient testing in GP surgeries, with the accuracy and precision of central laboratory analysis.

With low costs per test and rapid, accurate results, this will make programmes for the widespread screening and monitoring of cholesterol levels a commercially viable proposition.

Catapult provides equity capital of between £200k and £2m for growing businesses
